

MUSCLES IN CONTROL

Hey, Mx. Bone!
Do you want to play?

Yes, count me in! You just need to teach me how to use the controller! Wait...
... do I need muscles for this game?
That's not fair!

Do you want to control a computer game with your own muscle action?

Electrodes on your skin measure your muscle activation: this is called **electromyography**. This signal is used to control the game.

How does this demo work?

1. Place 2 electrodes along the muscle belly of your biceps brachii muscle. Connect with the red cables.
2. Place 1 electrode on your elbow bone. Connect with the black cable.
3. Start the game and follow the instructions: The stronger you contract your muscle, the higher the bird will fly!
