

SETUP MMG DEMOS

The MMG demos run on one laptop and can connect to multiple iPads via WiFi. The UoA-WiFi or eduroam don't allow us to that, therefore we create an own network for the iPads to connect to. There are two options:

- a) **Preferred option:** Use a router to generate a local network. The tablets then connect to the router WiFi.
- b) Connect the laptop to the available network (e.g., UoA-WiFi), then create a hotspot from the laptop and connect the iPads to the hotspot.

Why this is not recommended: The hotspot is not as stable as the router. It may be sufficient, if we are in a small space, just connecting 2-3 iPads.

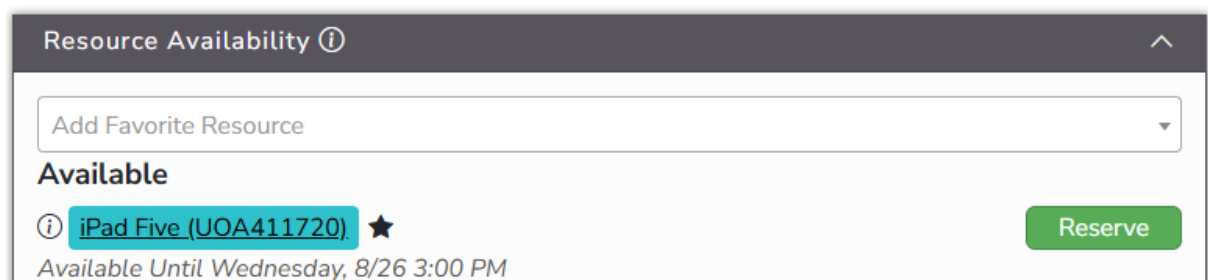

You can connect to the UoA-WiFi using your UoA credentials. We recommend deleting your credentials from the WiFi settings once you are done. On the laptop, go to Settings > WiFi > Manage known networks and click on "Forget".

You need the following items:

1. MMG demo laptop – stored in Mocap room on L8
2. iPads – pick up from IT (L1) after booking them through the ABI calendar
3. Router (Linksys) – pick up from IT (L1) after emailing Callum (callum.mccarthy@auckland.ac.nz) that you want to use the router.

How to book the iPads:

1. Log in to the ABI (Room) booking system: <https://rooms.bioeng.auckland.ac.nz/>
2. On the dashboard page, go to "Resource Availability"
3. Find the iPads, e.g., "iPad One (UOA411734)"
4. Click on "Reserve" and fill out when you need it

Password for iPads:

The password for the ABI iPads is abihouse

How to start the demos:

1. Turn on the MMG demo laptop – select the user “Administrator”, no password required.

Option A: Use router

2. Unpack the router, plug it in, and turn it on. Plug the LAN cable into “Ethernet 1”.
3. Connect the router with the laptop using the LAN cable (and the USB-to-LAN adapter). On the laptop, switch WiFi off.
4. On each iPad, go to the WiFi settings and connect with “Linksys”. If required, the password is on the back of the router.

Option B: Use hotspot of laptop

On the laptop, open the Settings > Network & internet > Mobile hotspot. Turn on the hotspot.

For each iPad, scan the QR code from the laptop hotspot settings to connect.

Double-check that the iPad is connected to the hotspot “MMG-demo” in the WiFi settings.

5. On the laptop, open the Anaconda Prompt (shortcut on the desktop) and run:
conda activate demo
6. Start the server dashboard by running:
python Desktop\mmg_demo\DemoServer\dashboard.py
A window with the dashboard will open.
7. Click “Start” to start the server.
8. Copy the URL shown and open it in the Internet Browser of the laptop – this is just a sanity check that the server is running.
9. Only if this iPad has not been set up before: On the dashboard, go to “ACCESS” and scan the QR Code “Trust a new tablet”. Follow the instructions to download the certificate.
10. On each iPad, open Settings > General > About and enable the Trust certificate “Administrator”
11. For each iPad, scan the QR code to connect to the server. If you receive a message “This is not a secure connection”, click “view more” and accept.
